PATENT APPLICATION
Docket No: 14321.7

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

INFORMATION DISCLOSURE STATEMENT
UNDER 37 C.F.R. § 1.97

Commissioner for Patents
PO Box 1450
Alexandria, Virginia 22313-1450

Sir:

Please find, pursuant to 37 C.F.R. § 1.98(a)(1), the enclosed Form PTO-1449 which contains a list of all patents, publications, or other items that have come to the attention of one or more of the individuals designated in 37 C.F.R. § 1.56(c). While no representation is made that these references may be "prior art" within the meaning of that term under 35 U.S.C. §§ 102 or 103, the enclosed listed references are disclosed so as to fully comply with the duty of disclosure set forth in 37 C.F.R. § 1.56.

Moreover, while no representation is made that a specific search of office files or patent office records has been conducted or that no better art exists, the undersigned attorney of record believes that the enclosed art is the closest to the claimed invention (taken in its entirety) of which the undersigned is presently aware, and no art which is closer to the claimed invention (taken in its entirety) has been knowingly withheld.

In accordance with 37 C.F.R. §§ 1.97 and 1.98, a copy of each of the listed references or relevant portion thereof that is not a US patent document is also enclosed.

Statement of Relevance of References Listed
Unaccompanied by English Translation
Under 37 CFR § 1.98(a)(3)

In accordance with 37 CFR § 1.98(a)(3), the following concise explanation of the relevance of each listed reference that is not in the English language and unaccompanied by a translation into English is provided.

Japanese Patent No. 10-282350: PROBLEM TO BE SOLVED: To provide an optical splitter effective for the wave-length multiplexing communication and the optical line test system. SOLUTION: In an optical splitter in which the signal light is transmitted between one or a plurality of first input waveguides formed by an optical waveguide on a substrate and a plurality of output waveguides, a wavelength filter to discriminate the signal light by the transmission and reflection is inserted in the output waveguides, and a plurality of second input waveguides in which the signal light is reflected by a wavelength filter and guided to the output waveguides, is provided.

Japanese Patent No. 2002-368695: PROBLEM TO BE SOLVED: To provide an optical line testing system that reduces a transmission loss of a communication light and testing light by an optical multiplexing/demultiplexing element and obtains sufficient cut-off amount of the test light. SOLUTION: The optical line test system is provided with a reflecting means that substantially reflects and prescribed wavelength, including a wavelength of the test light and almost passes through the wavelengths other than the prescribed wavelength, a 1st light guide path that makes the test light incident onto the reflecting means and receives a reflected light in the reflecting means receiving a return light of the test light, and a 2nd light guide path that receives a reflected light in the reflecting means which received the test light and makes the return light of the test light incident onto the reflection means. The 2nd light guide path is inserted into the optical line. Furthermore, an optical filter means that almost makes wavelengths other pass through than the prescribed wavelength including the wavelength of the test light is placed in the vicinity of the reflection means at a non-test block of the optical line.
